

**We've got the solution**

The new innovative mTimeSheet solutions is a cost effective portable solutions that provides the tools for fast and easy time sheets completion. The system is specially designed for outdoor sheet filling in various sectors like civil engineering. The user can now complete massive timesheets for any number of employees by simply pressing a few buttons.

Timesheets can include any number of activities per day plus a photo captured by the handheld's camera showing the task completed. Equipment operation sheets can be filled by using the same mechanism for any worker tools like vehicles, machinery etc.

Spot-check capability that offers the potential of performing specific productivity and performance controls on both equipment and employees in order to measure performance.

Specifically for the civil engineering sector, the mTimeSheet can also perform spot checks on subcontractors by measuring the number of employees and time spent in order to perform specific activities. The resulting data can be sent to any financial software for further analysis by the appropriate financial/costing department.

mTimesheet is a fully customizable solution that can be easily integrated to any pre existing financial, time keeping or costing software. Specially designed bridged are provided that enable the interoperation between the systems without the user's interference.

This solution uses the cutting edge tools to provide maximum level of service by utilizing Oracle's 11G Database as the repository and Oracle 10GR3 for the handheld to server synchronization. The later offers additionally a web environment for the system administrator that enables the constant device monitoring and management.

- *Fast & easy timesheet completion*
- *Supports Employees timesheets-equipment operation sheet and subcontractors progress reports*
- *Image capturing of the task performed*
- *GPS map assistance and position verification*
- *Back Office utility for authorizing and verifying the timesheets by multiple persons*
- *Supports Project/Equipment manager, timekeeper and foreman roles*
- *Enhanced spot check mechanism for specific productivity and progress checks*
- *Printable reports*
- *Easy integration with any existing system*
- *Multi language user friendly interface*

## Fast Time Sheet completion

Timekeeper can now fill sheets for many employees/equipment grouped with any number of activities in seconds. Additionally the user can also copy from one day to the next in order to minimize the time required. Also timesheets can be filled for up to a full week at once by further decreasing the time required.

## Specially designed for hard environments

The system supports the latest technology rugged handheld devices provided by Intermec and Motorola which are specifically designed for extreme conditions. The mobile client can be executed in any Windows Mobile enabled device.

## Maximum level of consistency

Oracle Lite 10G3 provides all the necessary tools that enable the remote data synchronization with the 11G repository without the need for the user to return to the head office. Device management, remote upgrade and synchronization (history) monitoring tools are provided to the administrator through an easy to use web based interface.

mTimeSheet System Operation Process

## Project/equipment managers and foreman roles

Managers can now use the mTimeSheet Back Office utility in order to approve, change, view, compare all the timesheets filled by the timekeeper now or in the past. Specific rules can be applied in order to match company's need.

## Further data collection for financial management

mTimeSheet provides tools that enable the collection of additional data through the spot-check mechanism that can provide a clear view of the productivity level and the task progress report. Moreover the images captured are stored in the database and can be retrieved for any report etc.

mTimeSheet System Architecture

## Printable Reports

The mTimeSheet Back Office system offer the capability of printing any type of reports in any printer connected to the manager's computer. These reports provide a paper based view of the sheets or spot checks.
